

Docket No. F-7943

Ser. No. 10/658,835

**AMENDMENTS TO THE SPECIFICATION:**

Please amend the second full paragraph on page 8, starting with "The housing sheath 11" as follows:

yes  
5/9/06

IDC-A1,AMD

The housing sheath 11 comprises the slot, which is indicated generally at 12. The two ends 11a and 11b of the housing sheath 11 are pulled together by the two screws 15, illustrated as first and third screws of three adjacent screws in FIG. 3. The two screws 15 are disposed parallel to the longitudinal axis of the slot. Moreover, there is the expansion screw 16, illustrated as a second screw in the three adjacent screws in FIG. 3. The expansion screw 16 is configured in the form of a stud screw, that is accommodated in the one portion of the housing sheath 11 and causes the slot to expand. Once the width of the slot 12 is adjusted, the screws 15 and 16 can be braced so as to fix the width of the slot. The screws 15 and 16 defining means for varying the slot width in the region of the slot 12 so that the diameter of the housing sheath adjusts to the diameter of the barrel sleeve. Furthermore, adjusting the expansion screw 16 tension biases the first two screws 15.
